PT Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT strands, useful for inhibiting expression of human vascular endothelial
PT growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT retinopathy and cancer.
XX
PS Disclosure; SEQ ID NO 490; 218pp; English.
XX
CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention
CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 200; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 310; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention
CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
```

CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
